Broadband Imaging and Photometry on Open Star Clusters

Tim Kornish

University of Montana

November 24th, 2014

Abstract

Introduction

Observations

observing NGC 1234 with 0.4m telescope at U of M.

Using R fro 5 seconds, V 5 seconds, B 10 seconds filters to produce a color magnitude image of the open star cluster

Sept 2

Methods

Analysis   Create Mosaic image due to dithering

Results

Concusion
